### Composite Door Maintenance and Cleaning

- Door handles are, by their very nature objects that require regular cleaning to remove build up of dirt and salt particles. The door handles **MUST** be cleaned with a very mild soap solution and a soft cloth every 2 weeks in coastal locations.
- Only use **warm soapy water and a soft cloth** when cleaning the door.
- Do not use anything **abrasive** or **solvent based** product or abrasive cleaning clothes to clean the door.
- Regularly clean out the **drainage channel** when the door is open it can become blocked by silt build-up which is common in this area.
- Lubricate any moving parts with a 3-in-1 maintenance spray or a silicone spray.

Please ask the Fitters to explain anything

you are not clear about.
